

Binary to Decimal Conversion Table 1-12

1												1#
	1024	512	256	128	64	32	16	8	4	2	1	
2												2#
	1024	512	256	128	64	32	16	8	4	2	1	
3												3#
	1024	512	256	128	64	32	16	8	4	2	1	
4												4#
	1024	512	256	128	64	32	16	8	4	2	1	
5												5#
	1024	512	256	128	64	32	16	8	4	2	1	
6												6#
	1024	512	256	128	64	32	16	8	4	2	1	
7												7#
	1024	512	256	128	64	32	16	8	4	2	1	
8												8#
	1024	512	256	128	64	32	16	8	4	2	1	
9												9#
	1024	512	256	128	64	32	16	8	4	2	1	
10												10#
	1024	512	256	128	64	32	16	8	4	2	1	
11												11#
	1024	512	256	128	64	32	16	8	4	2	1	
12												12#
	1024	512	256	128	64	32	16	8	4	2	1	

$$\begin{array}{|c|c|c|} \hline \cdot & \cdot & \cdot \\ \hline \end{array} = 0$$

$$\begin{array}{|c|c|c|} \hline \cdot & \cdot & \cdot \\ \hline \end{array} = 1$$

Binary to Decimal Conversion Table 13-24

13												13#
	1024	512	256	128	64	32	16	8	4	2	1	

14												14#
	1024	512	256	128	64	32	16	8	4	2	1	

15												15#
	1024	512	256	128	64	32	16	8	4	2	1	

16												16#
	1024	512	256	128	64	32	16	8	4	2	1	

17												17#
	1024	512	256	128	64	32	16	8	4	2	1	

18												18#
	1024	512	256	128	64	32	16	8	4	2	1	

19												19#
	1024	512	256	128	64	32	16	8	4	2	1	

20												20#
	1024	512	256	128	64	32	16	8	4	2	1	

21												21#
	1024	512	256	128	64	32	16	8	4	2	1	

22												22#
	1024	512	256	128	64	32	16	8	4	2	1	

23												23#
	1024	512	256	128	64	32	16	8	4	2	1	

24

Word 24: calculated by your hardware wallet. This word is not rolled by hand. It contains the mandatory BIP-39 checksum, which can only be derived mathematically from the previous 23 words, it isn't a free choice like the others. Once you've entered words 1–23 into a compatible hardware wallet (e.g. SeedSigner, Jade+, Foundation Passport), the device will calculate and display word 24 for you.
